SUMMARY

Full Stack Developer focused on e-commerce platforms, system integrations, and production applications. Since 2022, I have worked on Magento 2, Shopify, and PHP-based systems across both backend and frontend development. My experience includes ERP, CRM, marketplace and logistics integrations, custom Magento modules, Shopify storefront development, APIs, asynchronous processing, and performance optimization in high-traffic production environments.

WORK EXPERIENCE

MNM Teknoloji A.Ş.

June 2022 - Present

Full Stack Developer

Developed and maintained e-commerce solutions and integration services using Magento 2, Shopify, and PHP-based middleware architectures for brands including Rossmann, Saat&Saat, Dagi, Gürgençler, Armağan Oyuncak, Aldo, and Vicco.

Key Responsibilities:

- Developed and maintained ERP integrations (Dynamics, Hitit, Nebim, Paraşüt) and CRM integrations covering order, inventory, invoicing, and product synchronization workflows.
- Built and maintained marketplace integrations for Trendyol, Hepsiburada, N11, and LC Waikiki.
- Contributed to Magento 1 to Magento 2 migration work, including Hyvä frontend customizations and third-party integrations.
- Developed and customized Shopify storefronts for brands including Saucony and Merrell, working across theme development, frontend customization, and storefront performance.
- Developed GraphQL services for mobile application integrations and implemented Firebase push notification services.
- Improved performance and integration reliability across high-traffic e-commerce projects, including frontend and PageSpeed optimizations for Vicco.

EDUCATION

Karabük University - Biomedical Engineering

2016 - 2021

SKILLS

Backend Technologies: PHP, Symfony, Laravel, Phalcon

E-commerce Platforms: Magento 2, Shopify

Frontend Technologies: JavaScript, HTML, CSS, Tailwind CSS, Alpine.js

Integration and API: REST APIs, SOAP Web Services, GraphQL

Data, Search and Cache: MySQL, MongoDB, Elasticsearch, Redis

Message Queue and Async Processing: RabbitMQ

DevOps & Infrastructure: Docker, Kubernetes

Monitoring and Performance: New Relic, Grafana

PROJECTS

Order & Campaign Service

Developed a modular e-commerce order management API using Symfony 8 and PHP 8.4. Built a pluggable campaign engine using CampaignInterface and Symfony service tagging, automatically selecting the highest applicable discount. Implemented safe transactional stock handling to prevent concurrent update issues, along with Redis caching and Dockerized infrastructure.

Notification Service

Developed an event-driven multi-channel notification service using Laravel 13 and PHP 8.3. Implemented asynchronous processing with RabbitMQ priority queues, Redis-based idempotency and rate limiting, and pluggable SMS, email, and push notification handlers. Added scheduled delivery and retry support using an outbox-based approach, with MariaDB and MongoDB for persistence and request logging.

Magento 2 Log Viewer

Developed a Magento 2 admin module for monitoring application logs directly from the admin panel. Added support for system.log, exception.log, and debug.log with auto-refresh and error filtering. Integrated Magento ACL permissions and Composer-based distribution.

Magento 2 Quote List

Developed a Magento 2 admin module for viewing and inspecting quote and quote_item data directly from the admin panel. Implemented filterable and sortable grids with a dedicated quote detail page showing cart items, customer information, product details, and pricing. Integrated Magento ACL permissions for role-based access control.
